Majordomo Network Group  
 Majordomo Network Group Limited provides Augmented Reality (AR) & Virtual Reality (VR) technology. It has a cooperative relationship with Sinoini Innovation Hitech Company Limited. Currently, the team provides intelligent image processing and Artificial Intelligence technologies including face recognition, iris identification, machine and unmanned drone applications.

What do you think about future technology development and all others in coming five to ten years?  
 The future travel experience is becoming creative and more convenient. We can imagine that taking a plane in the future can be as convenient as taking a bus. Travellers only need to use their faces and iris identification to board a plane.  
 Different robots will travel travellers in the future. If they have luggage, robots will help them through. If travellers are hungry, robots carrying them down food. Drones unmanned aerial above will be attract for travellers to buy. They do not have to worry about a language barrier anymore.  
 Airport staff will get assist in the future. They will be able to provide more personalized services. They will have a variety of wearable smart gears to provide travellers with a more secure travel experience.

What are the pain points of the travel industry in Hong Kong?  
 Talent. The commercial aviation market is experiencing exponential growth, and the shortage of talent shortage is becoming increasingly prominent.  
 Risk. Airport staff are not effectively trained to deal with all possible risks, such as emergency handling, terrorist attacks, etc.  
 Service experience. The demand for digitalization in the technology are becoming higher, and the popularity of smart services requires constant application of new technologies to enhance the customer experience.

What solutions have you provided for solving those pain points?  
 Augmenting Reality (AR) & Virtual Reality (VR) technology solution.  
 AR/VR technology provides fast tracking knowledge transfer. Smart Workers using AR can perform effectively and access contextual knowledge on the spot where and when it's needed.

Sinoini innovation hitech co., ltd. accepted an interview with WenWeiPo and introduced the anti-epidemic prevention and control management system (Iris and Face recognition with body temperature detection) and intelligent positioning platform

Sinoini innovation hitech co., ltd. accepted an interview with HKSTP and introduced the AR glasses solutions that provided for the HKAA.

It is including epidemic prevention and control management system (Iris and Face recognition with body temperature detection) and intelligent positioning platform
